

MAGIC AQUA SAND RECIPE

What You'll Need

- Sand – sandbox or Craft Sand works best as it is generally a finer sand.
- Coloured Sand (you can either buy this or make it using the easy method found [here](#)).
- Fabric Protector Spray (we used Guardsman which cost under \$4)
- Baking Paper
- Plastic containers to store your sand
- Glass Vase
- Water

Instructions

Simply spread your sand over a sheet of baking paper in a well ventilated area (we made ours outside in the sun), have an adult spray an even but heavy coat of Fabric protector over the sand until it's damp all over, then allow to dry. We then raked the sand and repeated the above process once more to ensure even coverage.

Once the sand has dried simply place it into a container that is easy for the kids to pour from.

Fill a glass vase with water and let the kids build their own cool underwater sculptures!
